TABLE OF CONTENTS

01 INTRODUCTION

02 METHODS

03 RESULT

04 CONCLUSION

INTRODUCTION

- We have made a study about fetal health classification based on many factors like (Baseline Fetal Heart Rate, Number of accelerations per second, Number of fetal movements per second, uterine contractions).

Target

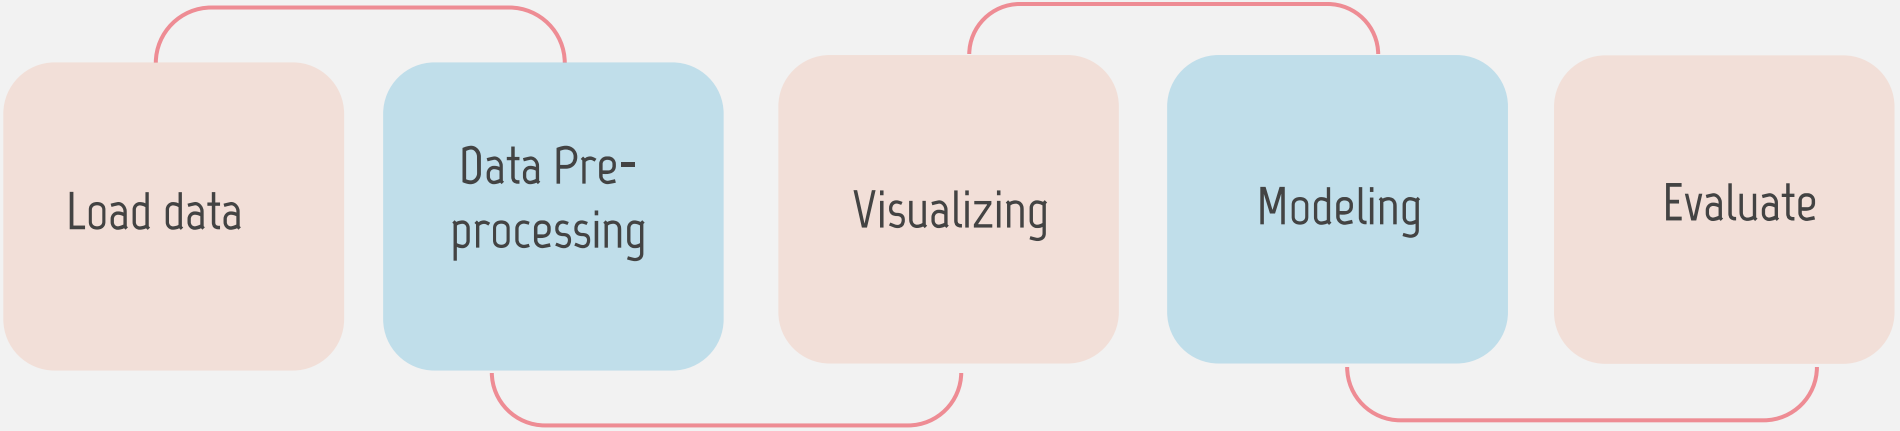
Y

(Fetal health) = Normal
Suspect, Pathological.

X

Features X = 21 columns

Steps :

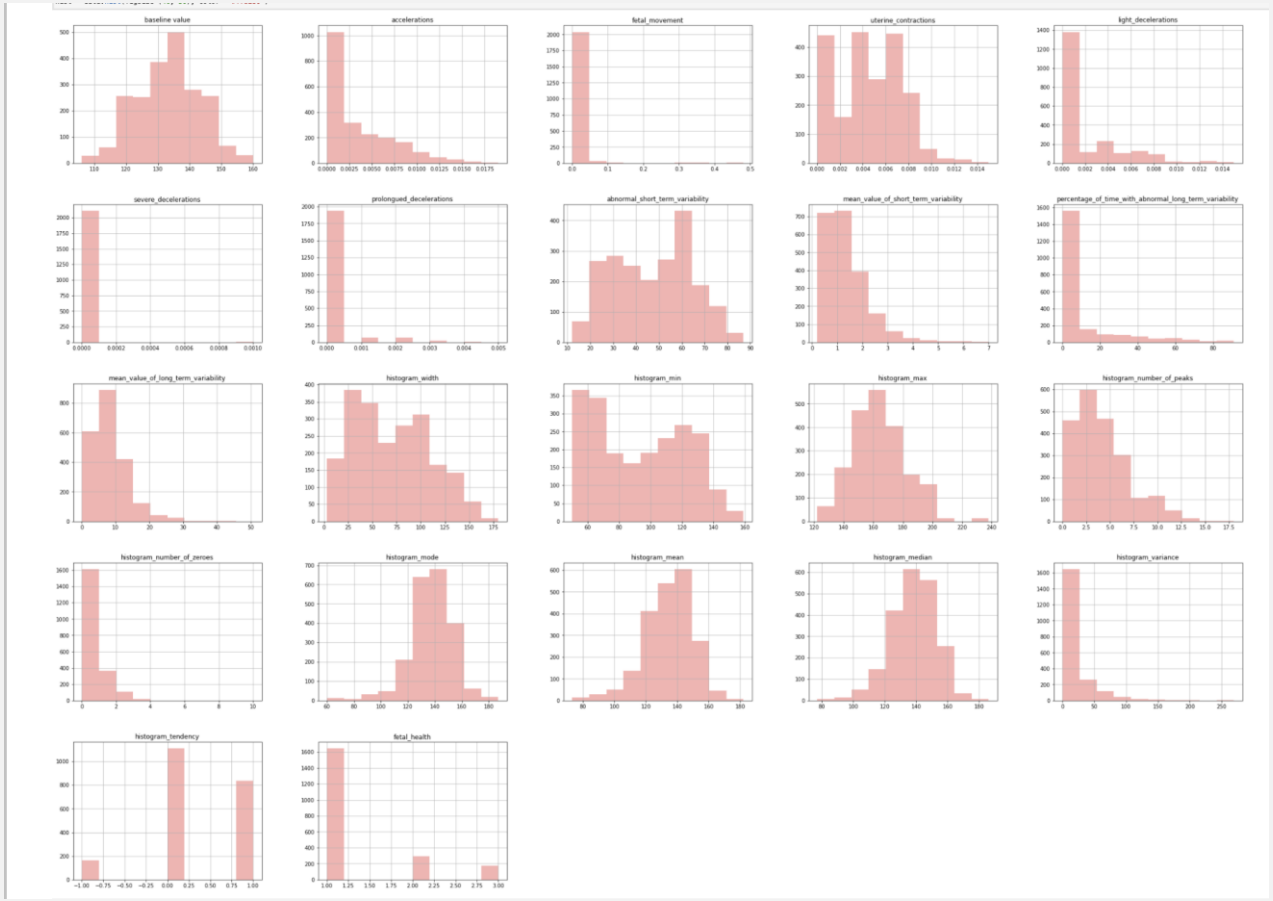


Load data
Data Pre-processing
Visualizing
Modeling
Evaluate

Tools :

1. Python Libraries
2. Jupyter Notebook

All Columns



baseline value
accelerations
fetal_movement
uterine_contractions
light_decelerations
severe_decelerations
prolongued_decelerations
abnormal_short_term_variability
mean_value_of_short_term_variability
percentage_of_time_with_abnormal_long_term_variability
mean_value_of_long_term_variability
histogram_width
histogram_min
histogram_max
histogram_number_of_peaks
histogram_number_of_zeroes
histogram_mode
histogram_mean
histogram_median
histogram_variance
histogram_tendency

MODELING

01

Logistic Regression

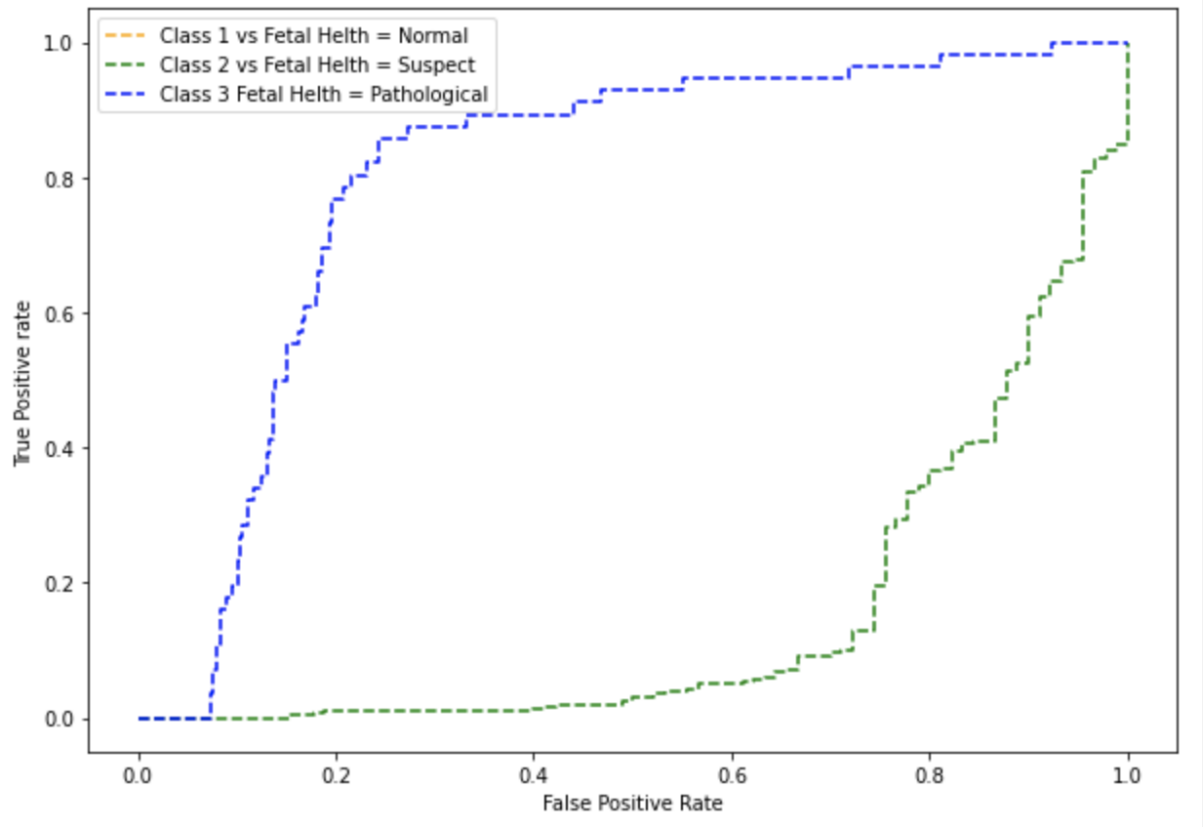
02

Random Forest

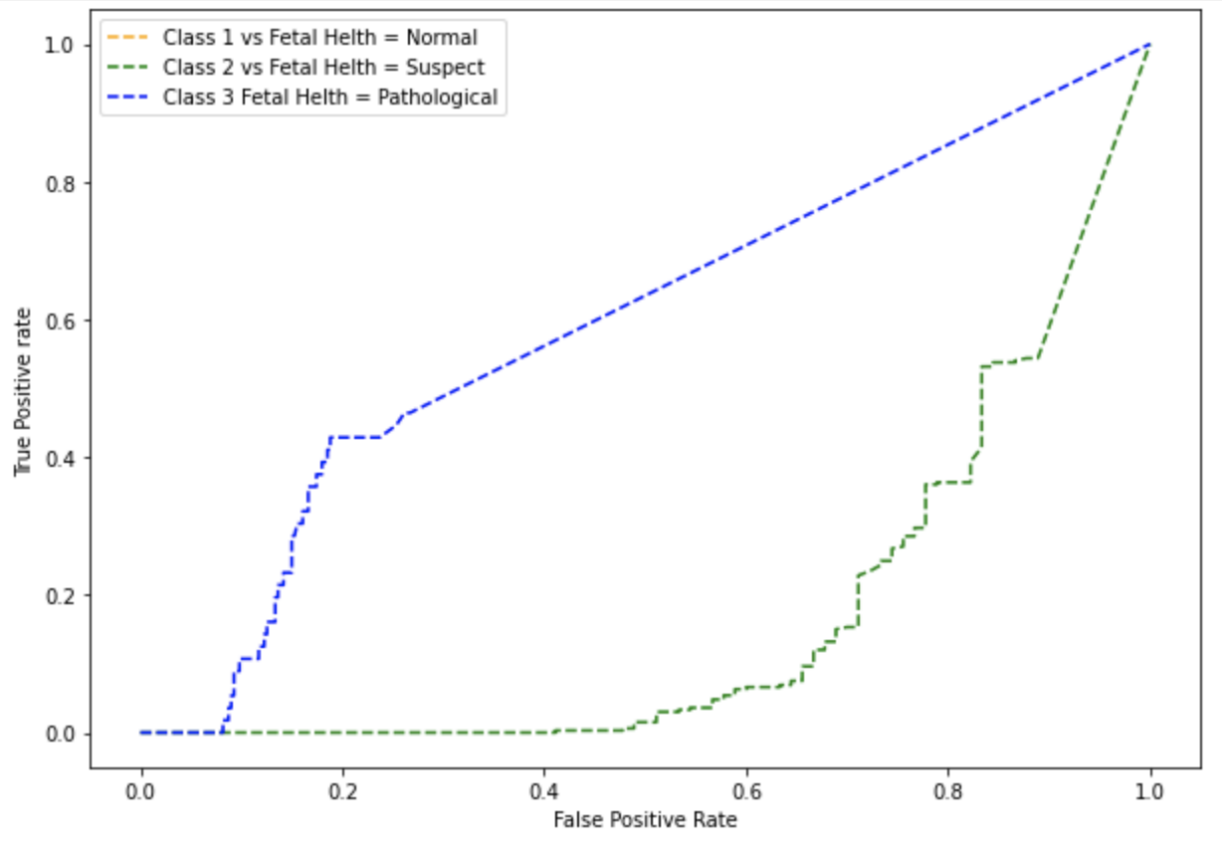
03

KNN

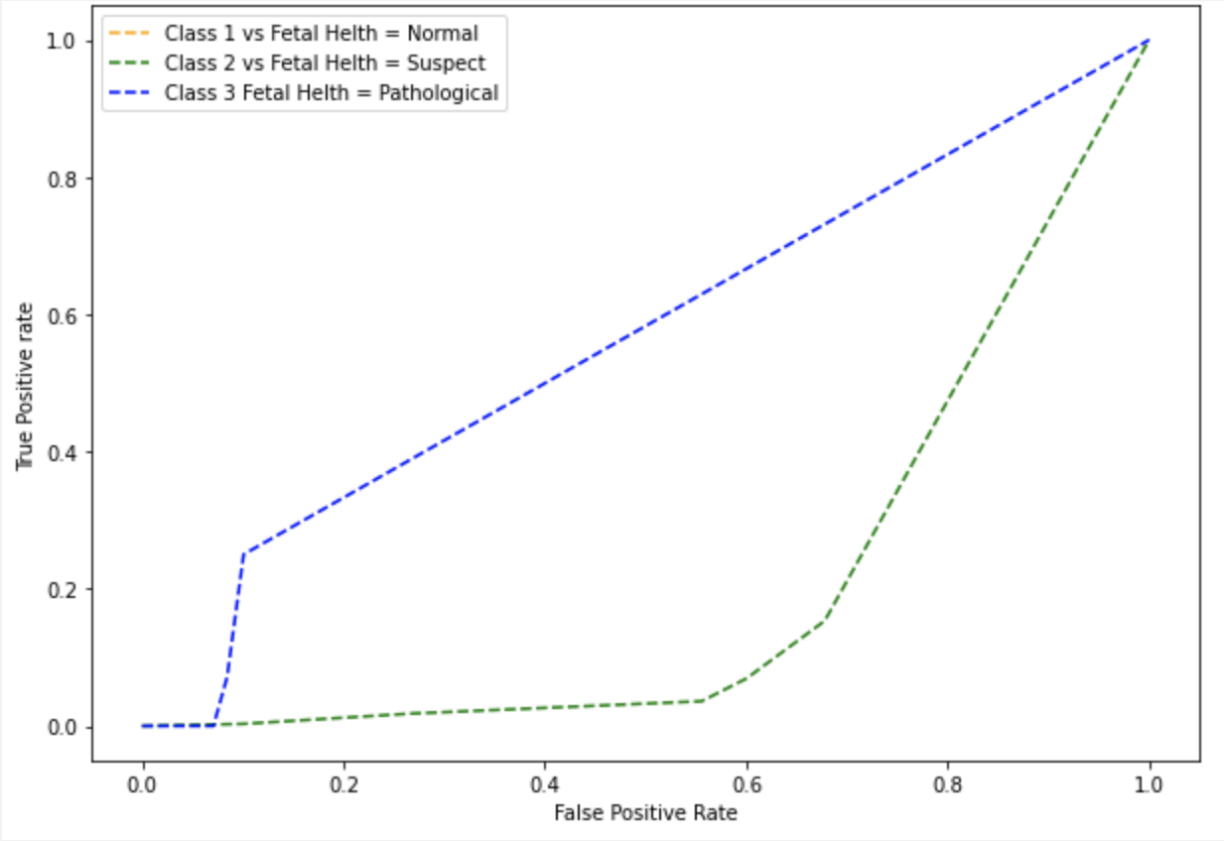
ROC: Logistic Regression



ROC: Random Forest



ROC: KNN



Class 1 vs Fetal Helth = Normal
Class 2 vs Fetal Helth = Suspect
Class 3 Fetal Helth = Pathological
True Positive rate
False Positive Rate
0.0
0.2
0.4
0.6
0.8
1.0

Conclusion :

At the end..
Random forest model is the best acuracy ..
